

README for X11R7.1

The X.Org Foundation

22 May 2006

X11R7.1 is an Open Source versions of the X Window System that supports many UNIX(R) and UNIX-like operating systems (such as Linux, FreeBSD, NetBSD, OpenBSD and Solaris x86) on Intel and other platforms. This version is compatible with X11R7.0 and other X window system implementations which support the X11 standard.

1. What is X11R7.1?

X11R7.1 is the second release in the X11R7 series. Tarballs for packages that have had updates since the 7.0 release are included in this release. To build this release, you will first need to get the packages from X11R7.0 and then add the new packages from X11R7.1 to them.

The 7.1 version is a new minor release that includes additional hardware support, functional enhancements and bug fixes. Specific release enhancements can be viewed in the Release Notes (RELNOTES.html).

Most modern PC video hardware is supported in this release, and most PC video hardware that isn't supported explicitly can be used with the "vesa" driver. The Release Notes (RELNOTES3.html) has a table showing the drivers provided with X11R7.1, and links to related documentation.

The X.Org Foundation X releases are produced by the X.Org Foundation. The X.Org Foundation has been formed as a Delaware corporation organized to operate as a scientific charity under IRS code 501(c)(3) chartered to develop and execute effective strategies which provide world-wide stewardship of the X Window System technology and standards. Membership in the X.Org Foundation is free to all participants. Applications for Membership are now being accepted, and active participants in the further development of the X Window Technology are invited to complete a membership application (http://www.x.org/XOrg_Foundation_Membership.html). The X11R7.1 codebase forms the sixth full X Window System release since the formation of the X.Org Foundation and includes code from the X Consortium, the Open Group and the XFree86™ project. This release is dedicated to the greater X community, developers and users alike.

2. Licensing

X Window System source code is covered by many licenses. All of these licenses have in common the fact that they do not impose significant conditions on the modification or redistribution of either source code or binaries beyond requiring one or more of the following:

1. Copyright and/or license notices are left intact.
2. Copyright and/or license notices are reproduced verbatim in documentation accompanying binary distributions.
3. Attributions are included with documentation accompanying binaries.

Most of these licenses are based on the MIT, X Consortium, or BSD (original and revised) licenses. All of them are consistent with the Open Source Definition (<http://www.opensource.org/docs/definition.php>), and most are consistent with the Free Software Foundation's Free Software Definition (<http://www.fsf.org/philosophy/free-sw.html>).

Copyright and Licensing information for X, including the reproduction of copyright and/or license notices and attributions required by some of the licenses for binary distributions, can be found in the License Document (LICENSE.html). If you find any omissions in that document, please contact us with details at [<xf_board@x.org>](mailto:xf_board@x.org). While the current licenses are all open source licenses, the X.Org Foundation is attempting, with time, to bring as much as possible of the code's licenses in the distribution into compliance with the Debian Free Software Guidelines (http://www.debian.org/social_contract#guidelines).

3. Pointers to additional information

The documentation for this release can be found online at the X.Org web site (<http://www.x.org/>).

The X11 version numbering system (including historical information) can be found in the Versions Document (Versions.html).

Additional information may be available at the X.Org Foundation Wiki (<http://wiki.x.org/>).

4. The Public Mailing Lists

Current information about the X.Org Foundation public mailing lists is available on the X.Org mailing list page (<http://lists.x.org/mailman/listinfo/>) and related desktop technology mailing lists can be found

on Freedesktop.org's mailing list page (<http://freedesktop.org/mailman/listinfo>).

5. Contributing to the X.Org Foundation's X efforts.

If you have any new work or enhancements/bug fixes for existing work, please send them to [<xorg@lists.freedesktop.org>](mailto:xorg@lists.freedesktop.org) or to our bug tracking system (<https://bugs.freedesktop.org/>) using the xorg component. This will help ensure that they are included in future releases.

6. How to get the release

Information about X11R7.1 can be found from the X.Org Foundation wiki (<http://wiki.x.org>), and at mirrors of this server.

6.1. X11R7.1

This is the second release of the new modular source code tree. The source code has been split into nine logical modules: app, data, doc, driver, font, lib, proto, util and xserver. Each of these modules contain one or more packages that can be configured, built and installed separately. Please see an X11R7.1 release site for a complete list of the tarballs.

For information on how to build the modular tree packages see the Modular Developer's Guide (<http://wiki.x.org/wiki/ModularDevelopersGuide>). This guide also contains information for developers who want to help improve the modular build system and modular code base.

6.2. The current development tree

The X source code for this and all releases/snapshots as well as development versions can also be accessed via the Freedesktop.org CVS repository. It's also possible to browse the freedesktop CVS repository (<http://cvs.freedesktop.org/xorg/>). The CVS tag for the 7.1 version is "XORG-7_1".

To check out the latest development version, don't specify any tag.

7. Reporting Bugs

Bugs should be reported to bug tracking system (<https://bugs.freedesktop.org/>) using the xorg component. Before reporting bugs, please check the server log file, which can be found at

`/var/log/Xorg.0.log` on most platforms. If you can't resolve the problem yourself, send the entire log file with your bug report but not the operating system core dump. Do not edit the log file as our developers use it to reproduce and debug your problem. Please attach it to your bug report.
